测试自动展开2uv工具

测试趣向平面复杂模型情况

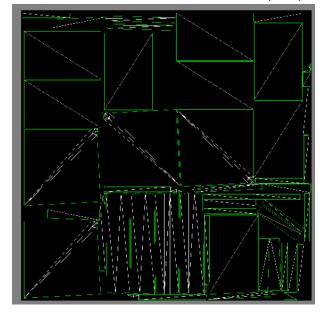

- 设置对的光滑组
- 模型完整没有断面
- 对于解包模型 一般会跟进1uv分割模型也会断开
- 要测试的模型

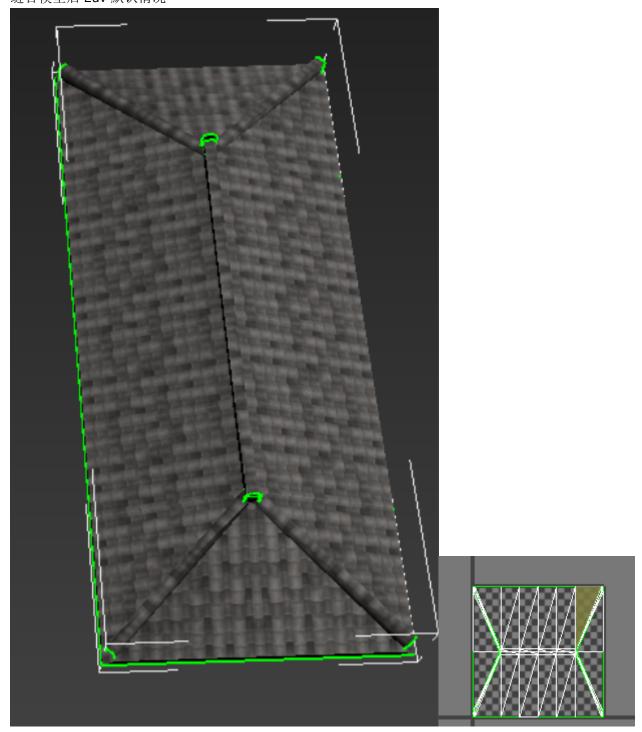

• 1 uv 情况

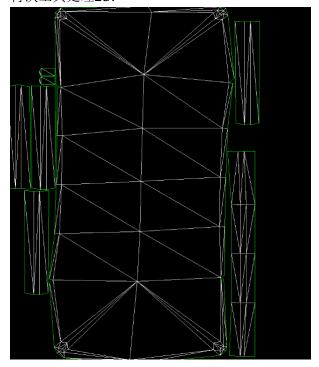

• 如果模型不缝合 使用工具处理2uv是这种 (碎了)

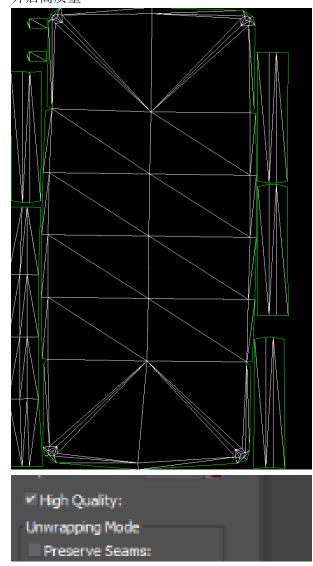

• 缝合模型后 2uv 默认情况

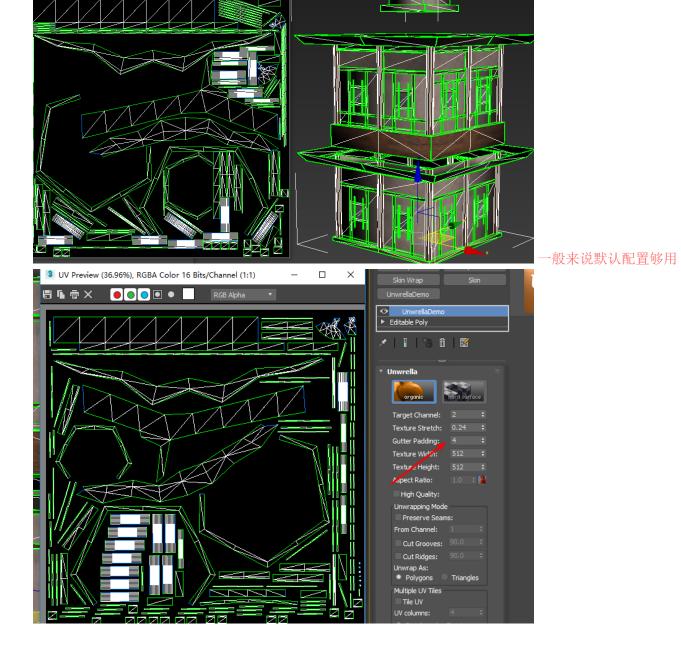

• 再次工具处理2uv

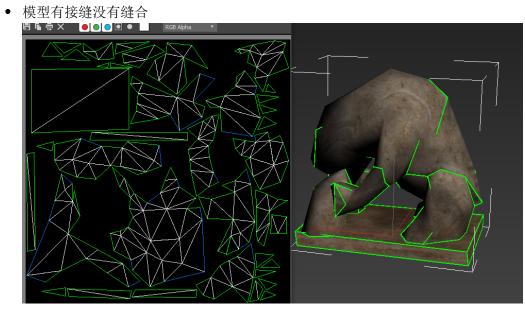

• 开启高质量

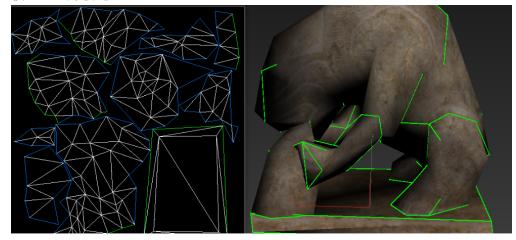

测试趋向圆柱的复杂模型

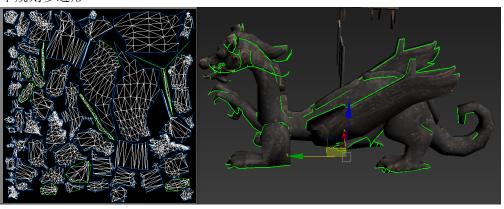

测试不规则多表型

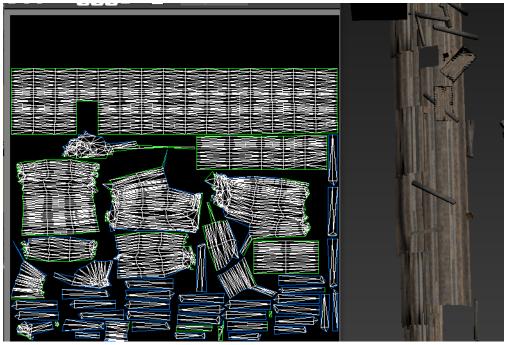

• 模型处理好接缝

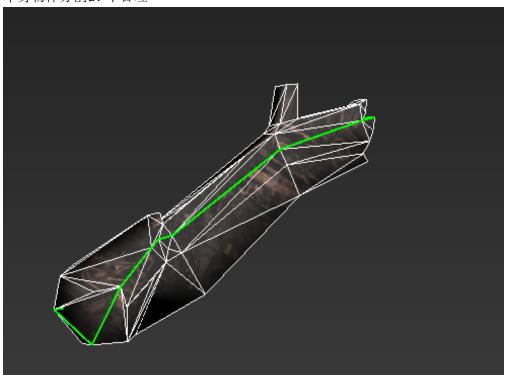

• 不规则多边形

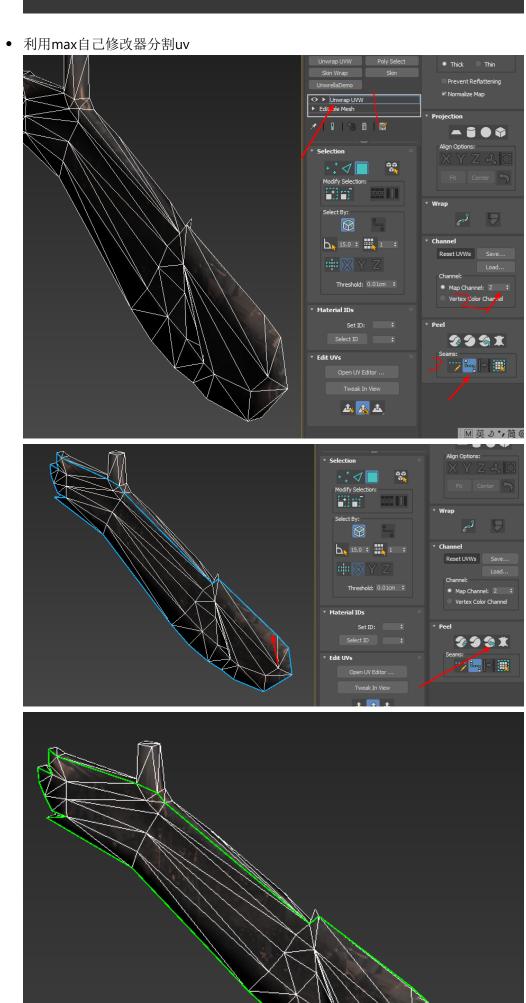

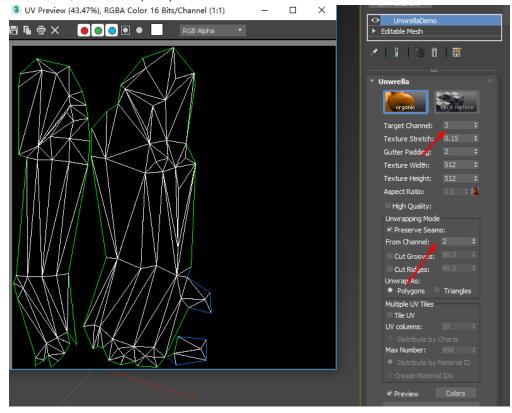

还可以从通道继承

• 本身物体分割uv 不合理

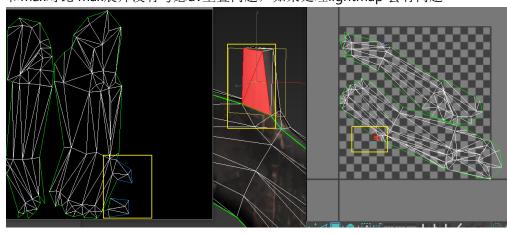

• 从从到继承然后展开 (unw)

• 和max对比 max展开没有考虑uv重叠问题,如果处理lightmap 会有问题

支持脚本可以批处理

```
his example creates a shpere, applies the modifier to it and unwraps it with a very small amount of stretching.

s = Sphere()
u = Unwrella2()
addModifier s u
u.stretch = 0.005
u.padding = 1
u.width = 1024
u.height = 1024
u
```
